

McLeod First to Integrate Rand McNally's IntelliRoute® Dock2Dock Software

Sep 08, 2009
Birmingham, AL

New Feature Provides Address-to-Address Truck Routing

In a move to bring more precise routing technology to customers, McLeod Software and Rand McNally today announced the integration of Rand McNally's recently released IntelliRoute® Dock2Dock solution with the latest release of McLeod's transportation management system.

McLeod Software, a leading provider of dispatch and accounting management software for transportation companies, is the first partner to integrate Rand McNally's Dock2Dock application. The partnership allows carriers and private fleets to access Rand McNally's proprietary address-to-address truck-drivable routing via McLeod's cutting-edge LoadMaster® transportation management product.

Rand McNally's IntelliRoute Dock2Dock is the first truck-drivable dock-to-dock solution for the commercial transportation industry that allows fleets to navigate on city and inter-neighborhood streets. Dock2Dock software provides nearly 7.0 million miles of U.S. truck-attributed roads made up of 24.3 million unique road segments. The routing takes trucks from the address of origin to the destination's dock and boasts coverage across the U.S., Canada and Mexico. IntelliRoute Dock2Dock is enhanced with datasets from NAVTEQ®, a world leader in premium-quality digital map data.

"We are constantly working to enhance our software to meet the needs of our customers and boost their productivity and profit," said Tom McLeod, president and CEO of McLeod Software. "Rand McNally's Dock2Dock software does just that. It integrates seamlessly with our LoadMaster trucking software to allow carriers -- who previously could only route city-to-city on highways and secondary roads -- to calculate a truck-routable distance between two precise physical addresses."

IntelliRoute also routes by truck type across all of Rand McNally's standard routing methodologies, including HHG, Practical, Quickest and Lowest Cost. IntelliRoute Dock2Dock takes navigation one step further by providing both physical restrictions, such as truck height and weight, as well as legal restrictions, such as turn limitations and truck-specific speed limits, to help minimize out-of-route miles and maximize fuel efficiency.

"LoadMaster's integration with IntelliRoute Dock2Dock brings all of the time- and cost-saving benefits of our software to McLeod users," said Donna Koppensteiner, vice president of the enterprise division for Rand McNally. "Our Dock2Dock solution helps dispatchers equip their drivers to navigate more efficiently and reach their destinations on time."

IntelliRoute Dock2Dock is currently available to LoadMaster IX Version 9.2 users. For more information about Rand McNally's mapping, routing and mileage software, visit www.RandMcNally.com/trucking.
