Download the Highlight™ App
On your smartphone, make sure that Bluetooth® and Location Services are turned on. These should be accessible via the settings on your iPhone or Android smartphone.
Download the app on your phone:
• Go to randmcnally.com/Highlight-bt-app
or
• Search “Rand McNally Highlight” within the Google Play Store or the Apple App Store

Box Contents
1. Highlight™ Bluetooth® tracker(s)
2. Double-sided sticker(s)
3. Lanyard(s)
4. Quick Start Guide

Your Highlight™

Attaching or affixing your Highlight™

CAUTION: Do not block the buzzer holes

NOTE: Color and finish of the Highlight tracker shown in the illustration may differ from that of the included items.
If a Highlight™ tracker is within Bluetooth® range, you can select the phone to view its last signal. If your Highlight™ tracker is out of range, and your phone cannot connect to it, you can view its last location for that item’s Highlight™ tracking. During this time, your application will not locate it using your Highlight™ tracker. Press the Highlight™ button twice and your phone will respond that the signal is lost. Selecting Immediately time you want the app to wait to send an alert after the signal is lost. Selecting 5 minutes will send an alert if a connection is not detected for more than 5 minutes. You can opt out of alerts when your Highlight™ trackers are out of range, i.e. a Bluetooth® connection is no longer detected. Check randmcnally.com/highlight for more details including the latest version of this guide.

Find your phone
When configuring your phone in the Highlight™ app, you can select it to play a sound and if you are locating it using your Highlight™ tracker. Press the Highlight™ button twice and your phone will respond.

Receiving alerts when Highlight™ trackers go out of range
To receive alerts, look under App Settings to ensure that Highlight™ Alerts is enabled. Select the appropriate Highlight™ from the My Highlights dashboard. Tap the Edit button. Change the Notify when out of range setting to show the amount of time you want the app to wait to send an alert after the signal is lost. Selecting Immediately is recommended for high value items. Be aware that you will be notified if the signal is lost momentarily. Choosing 5 minutes will send an alert if a connection is not detected for more than 5 minutes. You can opt out of alerts when your Highlight™ trackers are out of range, i.e. a Bluetooth® connection is no longer detected.

Pause and Resume Tracking
If you know you won’t be needing to keep track of a particular item, you can select Pause to turn off tracking. During this time, your application will not update the location for that item’s Highlight™. If you would like to turn on tracking for the item, select Resume.
